Hi all,

I am using the program timestamp.pro
while using the program this is the error, I am getting,

Compiled module: TIMESTAMP.
% Attempt to call undefined procedure/function: 'TIMESTAMP'

Can anyone let me know how to resolve this.

thanks

Is the routine in timestamp.pro a function or a procedure? Are you calling it with the appropriate syntax in your own routine?

It is a procedure. I am calling with the correct syntax. But I get the problem. One thing is I am using older version of IDL and this program is of newer version.
