Hello,

I would like to plot negative correlation in Talor diagram using full form of the diagram. I used Coyoto program but it uses only positive correlation. Any help would be appreciated.

Hello,

I would like to plot negative values of correlation in Taylor diagram. I tried with the latest routine of cgTaylorDiagram.pro, but it does not show negative scaling in the plot. Correlation value 0 to +1 scales are only shown. It only gives quarter of a circle plot(for +ve only), but half circle plots are available (+ve and -ve) in other languages (I noticed searching in google images). Can I request for any help?

Regards,
