Subject: Dialog_pickfile /DIRECTORY too low on the screen

When I use dialog_pickfile with the /DIRECTORY option it places itself much lower on the screen compared to the "normal" file-version does. So the OK/Cancel buttons are hidden and one need to drag the dialog_box up to catch those essential buttons.

Why is that and how can it be avoided?

I was trying to find the dialog_pickfile.pro to edit the yoffset, but did not succeed in finding it in lib.

Any ideas?
