Is anyone using SWAN (Software for Waveform Analysis) with IDL?

I am getting a rudimentary error while invoking SWAN Client from IDL. The error shows up as:

%Variable is undefined: WIDGET\_FONT\_0.

Any thoughts on this?

Using google to find the (17 year old) documentation

[ftp://lpc2e.cnrs-orleans.fr/projects/swan/pub/swan/doc/swan\\_ug.pdf](ftp://lpc2e.cnrs-orleans.fr/projects/swan/pub/swan/doc/swan_ug.pdf)

I can speculate (from page 14) that widget\_font\_0 should defined in the configuration file swan.cfg located in the directory swan/init. Is it?
