Subject: IDL-Motley and IDL-ROMS now on GitHub

Hello fellow IDL programmers

For some time now I have published two IDL code libraries on Sourceforge:

* MGH-Motley, a diverse collection of IDL routines for data processing and visualisation;

* MGH-ROMS, IDL routines for deal with inputs and outputs from the ROMS ocean model.

Sourceforge tells me that MGH-Motley has been downloaded by at least a handful people other than myself, though MGH-ROMS is not so popular (probably because Matlab is by far the most popular analysis system amongst ROMS users, with Python a distant second).

Anyway, for what it's worth, I have now ported these to GitHub, as

* idl-motley (https://github.com/hadfieldnz/idl-motley)
* idl-roms (https://github.com/hadfieldnz/idl-roms)

Mark Hadfield
