Hi everyone,

If I have array as `x=fltarr(1,1,56)`, If I want to display it at specific position I write

```
> window, xs=500, ys=1000  
> tvscl, x, 300, 525
```

My question is how I can save x at this position in new variable z, whereas when I write

```
> window, xs=500, ys=1000  
> tvscl, z
```

appear at the sam position (300,525)
