I'm trying to install the mif driver from Marty Ryba under hpux. I compile and link using the directions for call_external (which does work for some call_external modules I wrote), but I get the following response,

IDL. Version 4.0.1 (hp-ux hp_pa).
Copyright 1989-1995, Research Systems, Inc.
All rights reserved. Unauthorized reproduction prohibited.
Installation number: 2237-1.
Licensed for use by: U.S.B.R. Seismotectonics Group

```
% LINKIMAGE: Error loading sharable executable.
      Symbol: mif_dev, File = /we/geomagic/bin/hp700/mif_4.0.sl
```

```
% Execution halted at: $MAIN$
```

Has anyone had any experience with this? It works fine under SGI IRIX 5.3. Here are the flags I used for hpux.

```
# These are for HP-UX using the HP compiler
CFLAGS = -c +z -Aa -I$(INC)
CC = cc
LD = ld
LDFLAGS = -b
```
