Hi!

I would like to know what kind of problems can generate an error msg in IDL. The msg is:

```
% Compiled module: <module_name>
% Unable to allocate memory: to make array
  Not enough space
% Execution halted at: <module_name>
```

The FAQ has a similar case:

```
% Unable to allocate memory: to make array.
not enough core
```

Are these 2 the same case?

Thanks,

RitA
