Subject: Automatically Compiling IDL Posted by Justin Baker on Wed, 14 Feb 1996 08:00:00 GMT View Forum Message <> Reply to Message

I am trying to write a simple routine to automatically compile all of my IDL routines for a single application and then save the compiled result.

I want to do this so that I can use an XDR format file instead of having to re-compile every routine each time I run my application.

I have tried something like the following:

pro compileall .compile myprint mydisplay mycalc mygui save, filename='myprog.dat', /routines end

Unforunately, when I try and run "compileall", IDL doesn't understand the .compile command.

Is it possible to do what I want from a procedure (or batch file), or do I have to do the above interactively ?

Thanks in advance, Justin.
