
Subject: Newline in WIDGET_LABEL

Hello,

Is there a way to insert a newline character into a string that is used in a WIDGET_LABEL (i.e. make a multi-line label widget)? I tried to use the ascii non-printable characters for newline and then backspace, which works fine on the terminal, but is ignored in the widget. Surely this must be supported in IDL? I saw nothing in ? or the manual...

Thanks,

Bob
