
Subject: Looking for a multiple field entry compound widget

Before I create this from scratch, I thought it was worth asking...

Does anyone know of a compound widget that sets up editable fields for an arbitrary list of input parameters? I need a widget that displays something like the following for an arbitrary number of parameters:

```
Heading
Label1: [default1]
Label2: [default2]
Label3: [default3]
```

where

Heading is a text heading

Label1-n are parameter labels (passed to widget as a string array)

default1-n are default values (passed to widget as an array)

I would also like to pass minimum and maximum permitted values for the entry fields. The widget would return the values entered in the fields.

I know how to write this myself, I just wanted to see if I could save a little time.

Cheers,
Liam.
