MY BOSS is upset because he doesn't know what IDL is, and if he is upset, I'm upset, too (you know what I mean).

Please let me know:

- what is IDL (I know only it is a graphics package)?
 - is it a standard or a commercial package?
 - if it is a commercial one where is possible to buy it?
- on which kind of computer does it run?

Thanks a lot for your survival (for me) reply.

fabrizio ravegnani.
