Hi,

can someone explain to me what is wrong with my batch file. I would like to compile a few .pro files before running the main program so I thought I would have a batch file with

```
.run getmainmenudesc  
ip_analysis
```

when I type @ipa the silly thing say

'Can't open file for input: getmainmenudesc'

and then executes the main program and craches 'cause it didn't compile the first thing. Any ideas would be most appreciated.

Samantha
