
Subject: Perimeter or Vertices from the return of search_2D??

Has anyone developed some code that would find the perimeter or vertices of pixels returned by the search_2d routine. I have done a search on Peter Rileys web page using keywords such as "vertices" and "perimeter". Only get a procedure that apparently want a inputs of vertices and will then compute the perimeter etc. I have not been able to find a routine that can find either the vertices or perimeter given a a set of contiguous pixels (as returned by search_2d).

Any suggestions, algorithms known would be welcome
