
Subject: Xemacs/emacs modes for procedure editing?

I recently installed Xemacs v19.13 on our Suns and was wondering if anyone has developed a mode Lisp file for editing procedures. It would be nice to have something like the various C modes that are available, but even a bare-bones one would be nice.

Yes, there is a special IDL editing mode for emacs
From the lisp code:

```
:: "Major mode for editing IDL/WAVE CL .pro files" t)  
::  
::  
:: Source:  
::  
:: The latest version can be obtained via anonymous FTP at:  
::  
:: /eos.crseo.ucsb.edu:pub/idl/idl.el* (where * is latest version)  
:: /fermi.jhuapl.edu:pub/idl_emacs/idl.el
```
