
Subject: List Widgets: drag & drop?

Does anyone know if it is possible to make use of drag & drop events with list widgets? I have noticed that, when I click the middle mouse button on an item in a list widget, a drag & drop mouse pointer appears. The problem is, that this does not generate an event.
I would like to be able to drag a data file into a draw region. IDL documentation offers no help.

Thanks in advance,

No good way. Only hacks. :-)
