
Subject: labeling time series with dates

I'm trying to either find or develop a set of IDL code that will allow me to label time series plots with yyyyymmdd type labels. The routine would need to be generic enough so that I could call it and have it produce labels for any specified time interval, including weekly and monthly. This is a trickier problem than might appear at first glance.

Any suggestions? I have already reviewed one set of routines that do not perform as expected. Thanks for any help.

Chris

There is a nice timeaxis routine from JHU APL's IDL library; see the IDL FAQ for the address.
