Subject: CALL_EXT with SunOS Posted by mallozzi on Thu, 05 Sep 1996 07:00:00 GMT View Forum Message <> Reply to Message

Hi all,

I have a large IDL/FORTRAN package that I've ported to VMS Alpha, SGI, and Solaris. When I tried SunOS, CALL_EXTERNAL fails with the error

Id.so: mmap error(22)

Does anyone know what would cause this error? The shared image linked with no errors or warnings. Compile line was cc -O -PIC -c and link line was Id -o TEST_SHARE \$(OBJS) \$(LIBS)

Thanks, bob
