Can I do the following?

- 1) I want a procedure that I wrote check to see if a procedure has been compiled.
- 2) If not then compile the procedure from a default file
- 3) If the default file is not found then prompt for the file or exit.

I know how to do 1 and 3 but can't seem to find how to do 2. Can it be done?

Thanks,
pmw

Doncha just love these idiots that answer their own posts.

it seems that resolve_routine does exactly what I want to do.
