Actually, it's pretty straightforward:

```
plot,[0,100],[0,100],/nodata,xrange=[100,0],yrange=[100,0]
```

try:

```
plot,[0,100],[0,100], xrange=[100,0], /nodata
```

Although this plots the graph 'back-to-front' and
doesn't just change the tick labels.

Hope this helps

Tim

How about adding xrange=[100,0] and/or yrangle=[100,0]?

plot, [0,100], [0,100], /nodata, xrange=[100,0]

Try:
plot, /nodata, fltarr(2), xrange=[100,0], yrange=[0,100]

That is of course assuming that it's the X-axis you want to reverse. (If you specify both ranges and /nodata the argument still has to be there but is entirely ignored).
