We need to use PVWAVE encapsulated Postscript output frequently in other applications, such as Wordperfect and Pagemaker. We have had little problem using PVWAVE EPS output in Wordperfect, although with V4.01 images do not import. Nothing seems to work going to Pagemaker. Further study reveals that 1) PVWAVE outputs EPSF-1.2 and other applications that do produce importable EPS output say EPSF-2.0. Moreover, PVWAVE says %!PS-Adobe-2.0 while the others all say %!PS-Adobe-3.0. I conclude that one problem *may* be that PVWAVE's method of generating EPS output is out of date. Not speaking or thinking in Postscript, I cannot say for sure. Anyone else out there with smarts in this area, or experience with such problems?

[text concerning EPS deleted]

I have used PV-WAVE EPS output extensively over the past year or so, placing it into TeX documents. Have had no trouble at all, once I figured out how to do it !
