
Subject: "Cannot allocate colormap entry" problem with Digital Unix 4.0

We just upgraded one of our alpha workstations to Digital Unix 4.0 (with the new CDE) and are suddenly getting "Cannot allocate colormap entry for #xxxx" messages. In at least one case the result is that button labels (and even the buttons themselves) are invisible. The workstation is being used only as the X server. (The client nodes are an HP system and a VMS alpha. In the latter case, IDL is v4.0.1.) Does anyone have experience with solving this problem with DU 4.0 and IDL 4.0[.1]?

TIA,

Dave
