Hello !

I'm just writing a widget application and have some problems with WIDGET\_DRAW.

- 1) What for can I use the VIEWPORT\_EVENTS keyword ?
- 2) I want to set the XSIZE and YSIZE depending on the size of the used monitor (1208x1024 or 1024x768). Are there any system variables available to obtain these values ?

Thank in advance

Lionel
