I would like to divide an arr1(n,n,m) by an arr2(n,n) and be able to
obtain an array(n,n,m). I suppose there is a way to avoid the for
statements.
I had the idea to transform my arr2(n,n) in an arr2(n,n,m) where the
m-elements are all the same but REPLICATE does not work with the arrays.

Does some-one have an idea that could help me?

Thanks.
