---

I asked the swiss distributor of pv~wave for an offer  
and got the following response:

They ask for 15k Swiss Francs (about US\$ 12k) for a  
single user floating license on SunOS.

My questions:

1. What is the price in the US for pv~wave 6.0 (advantage or foundation)?
2. Is it cheaper for a PC platform (e.g. Linux, NT)?
3. Is there a way to get an old Version 4.0 (CL only) license?  
(we are about to acquire some pv~wave programs that run well on  
ver. 4 and crash on ver. 5 with a core dump. Vers. 6 not yet  
tested).

Thanks  
-juerg
