I could not run IDL on our IBM / rs6000 AIX server because of a problem of termcap / terminfo database. When I hit :

idltool

I get the message :

Could not load library libtermcap.a[shr.o]

Error was: No such file or directory

Do anyone has an answer to my terrible problem ? Is it possible to specify to IDL to use terminfo database instead of termcap database ?

Thanks for answer.

JM NICOLAS
