
Subject: Widget tutorial does not write .pro file

This is my first attempt to use any newsgroup and my first request for help from what I hope is the IDL users group.

Trying to learn widgets (under windows 95) and completed the tutorial but IDL will not write the .pro file as the tutorial describes. Get a brief error mssg saying that the file was not written. I want to examine it to get familiar with the widget construction syntax. Anybody know what might be wrong. The .wid file is saved correctly

Thanks for any help!!
Steve

Practical IDL Programming is pretty good, so I'm told:

David Fanning's book IDL Programming Techniques is good as well, both for GUI's and a wide variety of other things.
