
Subject: QMS output for Ultrix running IDL

Folks-

We are running IDL on a DECstation 5000 model 200, running Ultrix 4.2a. Several of our users would like to send their idl output to a QMS printer. They claim that they have been doing so for some time on our VMS cluster.

I asked our local IDL expert about it and he informed me that the code to do such a thing is included in the VMS IDL as user contributed software. He didn't believe such a thing existed in the SUNOS distribution, and had no idea as to whether or not such a capability existed in the ULTRIX distribution. He suggested I post the query to this newsgroup.

Thanks for any help,
Mark Silverstein
