hi,
my name is muriel taylor, i currently work on EOS and i am looking for any information on JAVA bindings to IDL. this is for RSI's IDL, not any others. there are a lot of applications on the net that i am finding that have java and idl together, but it is the wrong idl - it stands for Interface Design Language and they use the all caps logo IDL also. does anyone know of any java applications written for linking to RSI's IDL or any RSI IDL code written to link with java?

thanks, muriel taylor (taylor@stars.gsfc.nasa.gov, or mtaylor@eos.hitc.com)

.
