Mailloop v2.0 is an industrial strength bulk mailer.

Using it is easy:

- 1) Create a message (<http://www.mailloop.com/editor.html>)
....by using the pull down menus or
....by using any editor
- 2) Create a newsgroups list (<http://www.mailloop.com/news3.html>)
....by filtering an NNTP server or
....by importing from any text file or
....by manually creating with any editor or
....by extracting from any FTP file or
....by extracting from any HTTP file
- 3) Create an e-mail list (<http://www.mailloop.com/em3.html>)
....by extracting from newsgroups or
....by importing from any text file or
....by manually creating with any editor or
....by extracting from a WHOIS response or
....by extracting from a fingering response or
....by extracting from a UNIX response or
....by extracting from any FTP file or
....by extracting from any HTTP file or
- 4) Broadcast the message
....to the e-mail list or (<http://www.mailloop.com/embc.html>)
....to the newsgroup list (<http://www.mailloop.com/ngbc.html>)
- 5) Then process the remove requests
....by using the mailbox processor (<http://www.mailloop.com/pop.html>)
