Can't help you directly, but you may find this
site useful:

<http://ednet.gsfc.nasa.gov/Mathews/misc/idl-www.html>
It's about using IDL on the Web and contains example perl
scripts for using IDL to generate GIFs which are then displayed
on the Web.

Tim

PS I couldn't email you. Your address is set up just as "dsilver"
with no domain name!

Check with your sysadmin as to where the server lives. Usually there is a log directory that contains the various server logs, one of which is the error log. I'd check there first.

BTW, I'd check your mail program and set your email address to the proper address so others outside your domain can reply properly! :)

Good luck,
Phil
