
Subject: Internet IDL script

I'm trying to set up an IDL program which will run interactively on our website. A script calls idl and runs the idl program that creates a simple gif using a pixmap. This part works when I try it from a normal window, but it fails when it is called through Netscape.

Any suggestions?

Is there a way to save any error messages that might be generated over the net so I can see what I am doing wrong?

Thanks.
