Subject: Iconising IDL Widgets

I've seen this question asked before (once by me!) but I've never seen an answer. Not even one to say it can't be done!

The question is:

Is it possible to create a new icon image for an IDL widget, so that it is easy to tell them apart when they are iconised?

My application has a lot of windows, and they all look pretty much the same when they are iconised (except for the text of course). Although I try and control their iconisation (?) with the software so that they are open and available when the user needs them, it would be nice if I could also give them a recognisable icon to so that (s)he can select them easily too.

So, is it possible or impossible? :)

Tim Patterson
