Hello,

My installation of IDL 3.6.1 under HP Unix did not survive the system upgrade to HP-UX 10.20. I am trying to tvscl square 2-dimensional arrays, which works fine if the dimensions are le 180, otherwise it hangs idl. Does anybody have an explanation/ remedy for this? Help would be very much appreciated.

Thanks in advance

Rolf

I met the same problem when upgrading from HP-UX 10.01 to 10.20 with IDL 4.0.1

You need to install two HP patches (available through the net from HP) PHCO_8892 and PHCO_9295 (they concern libcurses)

Our problem is now fixed.

Cheers
