I just got my pre-release of IDL5.0 in the mail today! I haven't had a chance to install and play, and unfortunately won't for a bit....

Just thought I'd let y'all know that they are shipping. Has anyone had a chance to play with it at all?

Later,
Phil

If you check the installation notes, they tell you to use:

unsetenv LM_LICENSE_FILE
first, and this works.

Yeah, we figured that out after reading the letter which made the claim that NO LICENSE MANAGER was needed, but we kept getting the 7 minute demo.

Thanks anyway for the tip.
