PV-Wave has a similar function, but the chance of it restoring
an IDL SAVE file are slim and none. (IDL SAVE files don't even
bridge different versions of IDL!)

If it's just data you want to save (not the name of the variable, etc.),
then you are much better off to open an XDR data file, write the
variable into it, and send that to your friends. This file they **will**
be able to open and read. Your code will look like this:

```
OPENR, unit, 'mydata.dat', /XDR, /Get_Lun
WRITEU, unit, variable
FREE_LUN, unit
```

Cheers!

David
