I get bus errors and seg. faults when I try to do a `ncdf_varget` with a range specified. Usually IDL is much more gracefull about such things. I may track it down and post a summary later.

Try to put some data into the file? Or try some other operation whose success depends on the file's mode? If it walks like a duck...

I don't think IDL has any way to inquire whether the netCDF file is in define or data mode. Normally I keep track of that myself.

```
selectMonths = Where(months GE 4 AND months LE 8)
```

Cheers,

David
