---

I have a problem with the WMENU.PRO routine which is located in standard idl directory (idl/lib/obsolete/).

It works in PC, MAC, and UNIX if typed

```
wmenu
```

in the idl prompt, but it fails in PC and MAC (works in UNIX) if typed

```
a=wmenu(['menu','item 1','item 2'], title=0)
```

The error message showed

```
'wmenu: routine is not defined in the current graphic device'
```

Did anyone ever get this problem in IDL ? I need some help !

Appreciate,

Poju Lin
