I have a problem with the WMENU.PRO routine which is located in standard idl directory (idl/lib/obsolete/). It works in PC, MAC, and UNIX if typed wmenu in the idl prompt, but it fails in PC and MAC (works in UNIX) if typed a=wmenu(['menu','item 1','item 2'], title=0) The error message showed 'wmenu: routine is not defined in the current graphic device' Did anyone ever get this problem in IDL? I need some help!

Appreciate,
