
Subject: Q:info /recall_commands to string?

Hi together!

I wrote some progs to switch the plot device to PS and back
and want the PS-files to contain information about the
calling history.

So: can I get info,/recall putting the output to a string or file?

Thanks for any help,

Andre

Hi Andre,

Do you mean "help, /recall"? Or is this some Wave thing?

In IDL, I would run a journal thus:

```
journal, file="savecmds.txt"
```

stopping the journal with a straight "journal" command.

You can then read the file in the normal text reading way (READF).

You may want to check if a journal is already running by checking the
!journal system var. Check out the Help page for journal for more
tricks.

Cheers,

Dave.
