Subject: PV-Wave: Using Postscript fonts
Posted by Dirk Talkenberger on Wed, 09 Apr 1997 07:00:00 GMT

Hallo,

I normaly use the software fonts for labeling graphics and it is
no problem to mix symbols and normal characters in a label.
Now I would like to do the same using the hardware Postscript fonts.
Besides shifting characters up and down I cannot find any hints in the
documentation on how to change the font itself.
The question is how to typeset a string like [TeX on] G_{R\psi} [TeX
off] ?

Thank you in advance,

Dirk
