I am pleased with the way that the widget-based interactive plotting routine PWIDGET (introduced in IDL V3.0.0) works under OpenWindows. But I have not had any luck getting PWIDGET to work under VMS Motif -- I can display the widget controls or the plot window but not both at the same time. Has anyone managed to successfully run PWIDGET under VMS?

In my IDL distribution the file in question is
in idl_4/lib/obsolete/pwidget.pro.
