Subject: PV Wave on a PC - Need editor

A coworker, who has used PV Wave in the past on an Unix box,
has switched (unfortunate fellow!) to a PC. Does anyone know
of an editor that gives line numbers? He is going nuts figuring
out where his errors are in somewhat long procedures and functions.
(Please do not tell me the he should never have moved to a PC --
I have already given him that piece of helpful advice!).

thanks

I use Codewright. It is an excellent programmer's editor.
It can be easily configured for different language support
(i.e., chromacoding of comments/keywords/etc) by loading
of the appropriate DLL. I have written a DLL for PV-WAVE
language support. If anybody is interested, I would be happy
to send it to you.
