
Subject: Aaaargh over surface plots of polar data

Am I the only one that goes ballistic about IDL every time I have to analyse polar data? One would expect that the winner of the Reader's Choice Awards in Scientific Computation and Automation would be able to do surface plots of such data.

And using trigrd, triangulate and tri_surf (or whatever) is a pain. Not to mention the aggravation of the missing data that allways manages to obscure relevant features.

Now I feel better. Have a nice weekend :-)
