I am trying to implement a fractal model of mountains into a kalman filter and the problem is - I don't have the fractal model!!!

I have no experience with fractal geometry and theses things and I try to estimate unknown areas in radar images by using different models. One of these models should be a fractal one (the very best should be a kind of adaptive fractal model).

Is there anyone who has experience with fractal geometry especially as generating model described in vector matrix form...

Thanks

Achim
