Hi,

I got an error which I don't understand.

```
% Internal error: VAR_COPY, dynamic bit not set.  
% Execution halted at: GETHELP      442 gethelp.pro  
%           MFD_READ      31 gen_inh2.pro  
%           $MAIN$  
IDL>
```

What is the dynamic bit and where can I set it?
