Hi Prof. Fanning...!

You are really fast killer of our full questions :) aout IDL!
My "export display problem" was solved... Thank you.

Just this one now:

If I choose a backgroud color in xloadct, say white, then I need
use slicer to look inside the 3D object. The proble is that in
slicer my choices of backgroud are lost and I cant reach the
white backgroud color in slicer... :(

Thank you.
