It is an IDL executable.

> Did it mean an executable IDL script?

No, this is a real executable, just like what you and everyone else wants to build.

> What will it cost?

More than you want to pay. :-)

RSI must do the embedding of IDL into your application. I hear this is "ridiculously expensive" to quote someone who wrote me about it just today. The general feeling is that if your are not also selling high-priced medical equipment or some other item in which you can bury the couple of hundred dollars cost, you will not be interested in this option.

(I'm making the numbers up, although I think I am not far off based on several recent conversations with disgruntled small-scale software developers. Check with your local IDL sales rep for the actual costs.)

Cheers,			
David

It is unfortunate that IDL is not (maybe they are ???) working on expanding this capability to more affordable and user developing option.

Mathworks (MATLAB) offer you their MATLAB C-library and C-compiler for reasonable cost and let you build an exexutable yourself. It is still limitted, but, I believe, it is a step in the right

direction. I wish RSI were more aggresive in their competition and incorporated more of the obviously good ideas.
