
Subject: Getting current MAIN procedure filename

Hi,
Is there a way to get the name of the current PRO filename that has been compiled as \$MAIN\$? I can see it when doing HELP,/SOURCE but can get this info into a variable. My plan was to assign the help output to a variable and search for \$MAIN\$ and get the filename from that line. It's useful when doing plots to stamp each with the date and filename that generated it. Thanks,
Paul

Yes it is
look at my example.

```
=====
print,'hello'
```

```
whoami,dir,name
print,dir,name
```

```
end
=====
```

output:

```
.ru test
```

% Compiled module: \$MAIN\$.
hello
% Compiled module: WHOAMI.
% Compiled module: GETWRD.
% Compiled module: FILEBREAK.
% Compiled module: REVERSE.
test.pro

=====

whoami.pro belongs to Ray Sterner.
