I. Platform UNIX (IRIX 6.3)

Here's the situation

- 1) I have a draw widget graphics_level=2, color_model=1, retain=0
- 2) Middle mouse click and drag changes the palette object assigned to the widget.
- 3) When the mouse is dragged outside the draw window the dynamic update stops.

I have not noticed this w/ the Mac version.

II. Platform Mac (Pre-release)

Menu bars in widget apps frequently show up w/ ghosts in different font and size.
